New York MTA ServicePulse 360 Workshop

October 19-20, 2026

Forward-looking statements

This presentation contains forward-looking statements about, among other things, trend analyses and statements regarding future events, anticipated growth and industry prospects, and our strategies, expectations, or plans regarding product releases and enhancements. The achievement or success of the matters covered by such forward-looking statements involves risks, uncertainties, and assumptions. If any such risks or uncertainties materialize or if any of the assumptions prove incorrect, results or outcomes could differ materially from those expressed or implied by these forward-looking statements. The risks and uncertainties referred to above include those factors discussed in Salesforce's reports filed from time to time with the Securities and Exchange Commission, including, but not limited to: our ability to meet the expectations of our customers; uncertainties regarding AI technologies and their integration into our product offerings; the effect of evolving domestic and foreign government regulations; regulatory developments and regulatory investigations involving us or affecting our industry; our ability to successfully introduce new services and product features, including related to AI and Agentforce; our ability to execute our business plans; our ability to meet our long-term revenue targets and profitable growth framework; the pace of change and innovation and our ability to compete in the markets in which we participate; our ability to maintain and enhance our brands; and expectations regarding contributions from acquired companies.

Source: FY26 Salesforce Customer Success Metrics

Customer Service

Service

Case Management

What it is

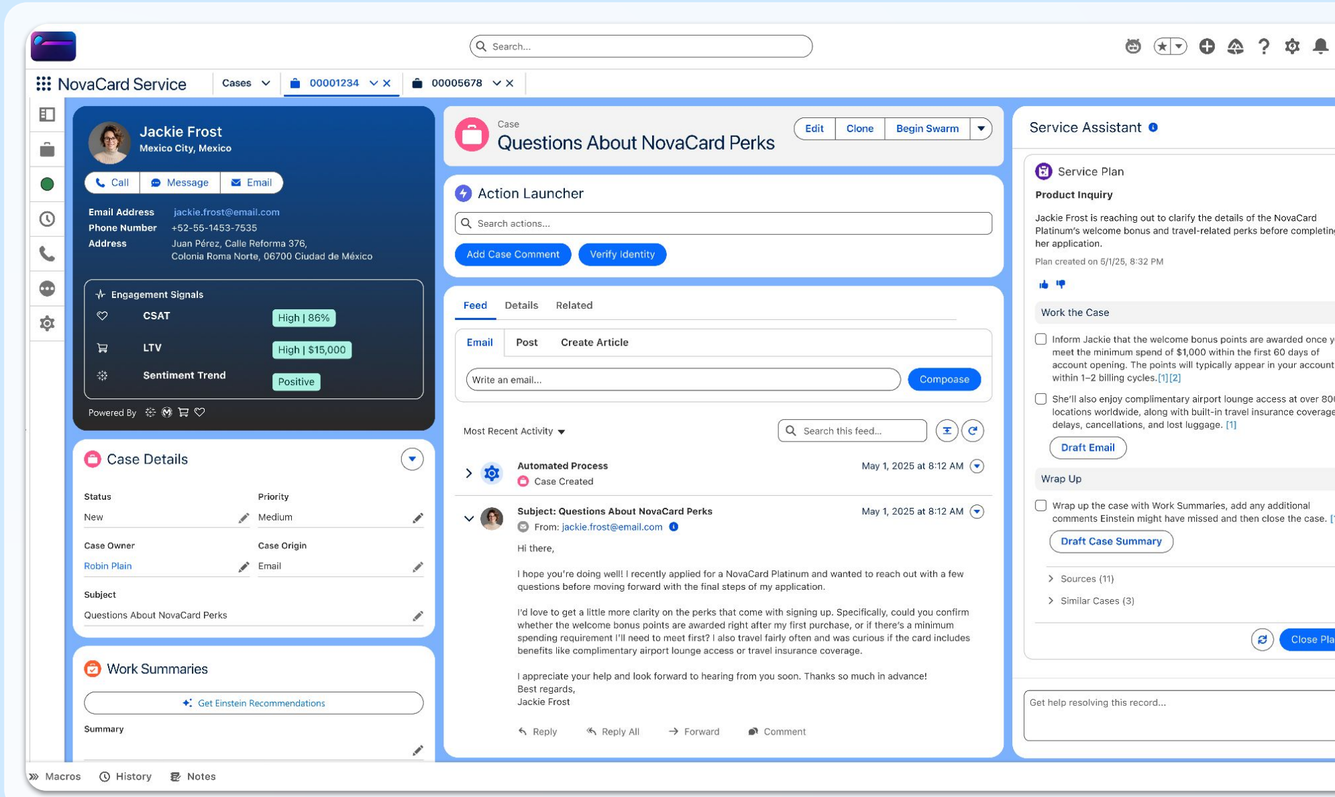

A unified service platform that empowers teams to manage every customer interaction (across email, chat, social, and more) from a single, intelligent workspace.

Why it matters

Transform customer support from slow and fragmented into fast, personalized, and proactive, saving time, reducing frustration, and driving satisfaction.

How it's different

Combine AI-powered automation, real-time collaboration, and actionable insights in one platform so teams can resolve issues smarter, faster, and together.

32% increase in resolution in the first interaction

GA

Customer Service | Service

Incident Management

What it is

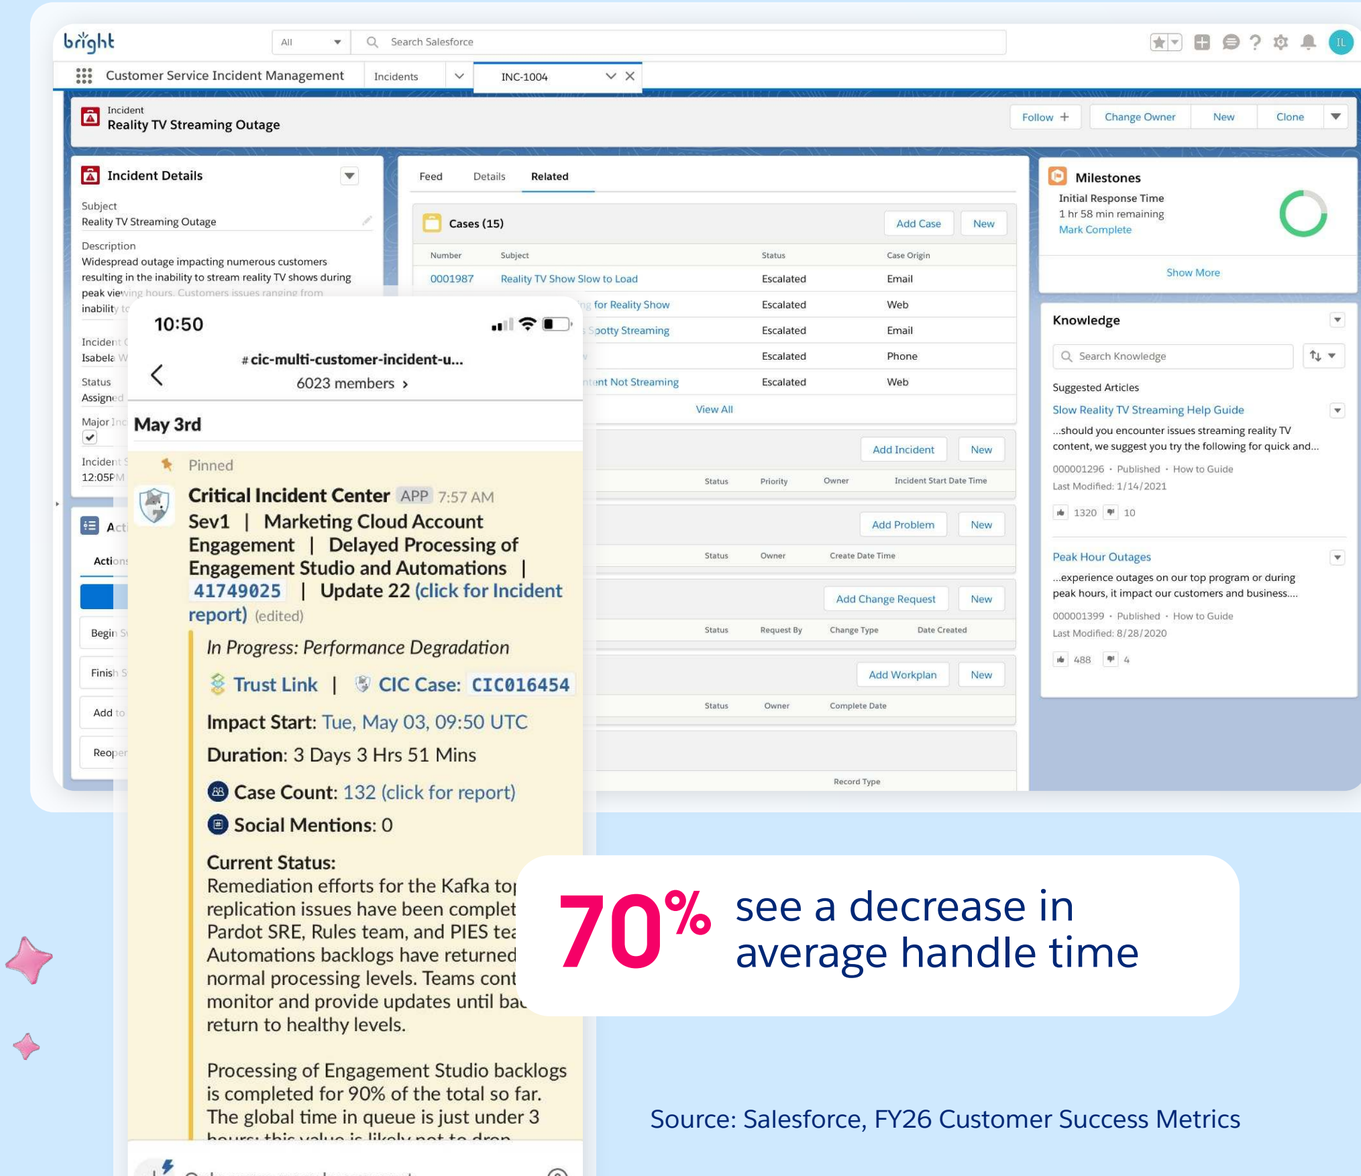

A real-time incident management platform that helps teams detect, respond to, and resolve major disruptions quickly, keeping operations and customers running smoothly.

Why it matters

By reducing downtime and streamlining response, organizations protect customer trust, minimize operational impact, and strengthen loyalty.

How it's different

Unites real-time collaboration, automated workflows, and actionable insights so the right experts can swarm incidents, communicate clearly, and restore services faster.

70% see a decrease in average handle time

Source: Salesforce, FY26 Customer Success Metrics

Customer Service | Slack

Slack Swarming

What it is

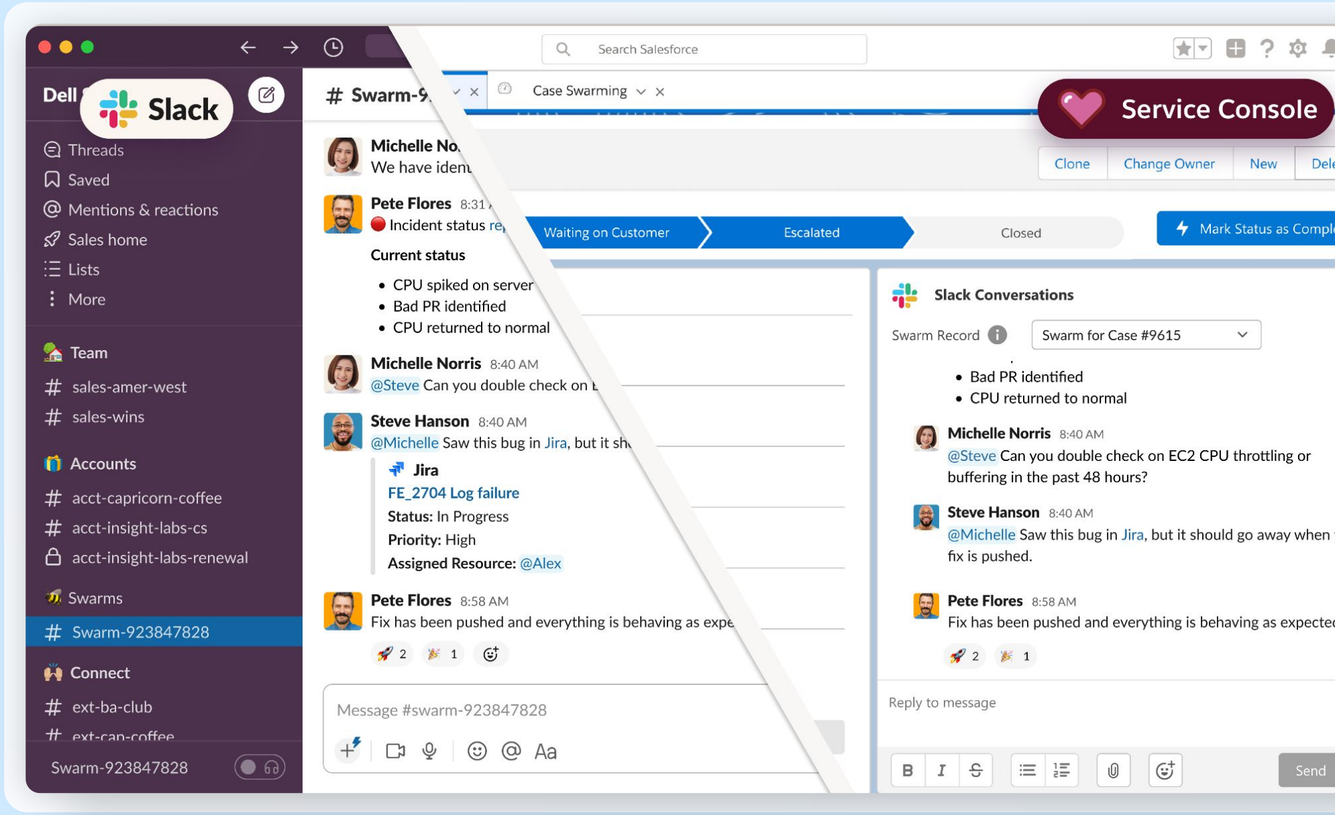

A unified console that helps service teams resolve issues faster by connecting with the right experts on Slack.

Why it matters

Boosts productivity, reduces swivel chair, and accelerates case resolution by helping teams connect with experts directly in the service console.

How it's different

Integrates AI-assisted responses, Slack-based swarming, and centralized workflows so service reps can act efficiently without switching between systems.

32% increase in resolution in the first interaction

Source: Salesforce, FY26 Customer Success Metrics

Customer Service

Agentforce for Service

Agentforce for Service

What it is

AI that turns service organizations into an intelligent, self-optimizing engine that resolves routine inquires automatically and equips teams to solve complex issues with unprecedented speed and precision

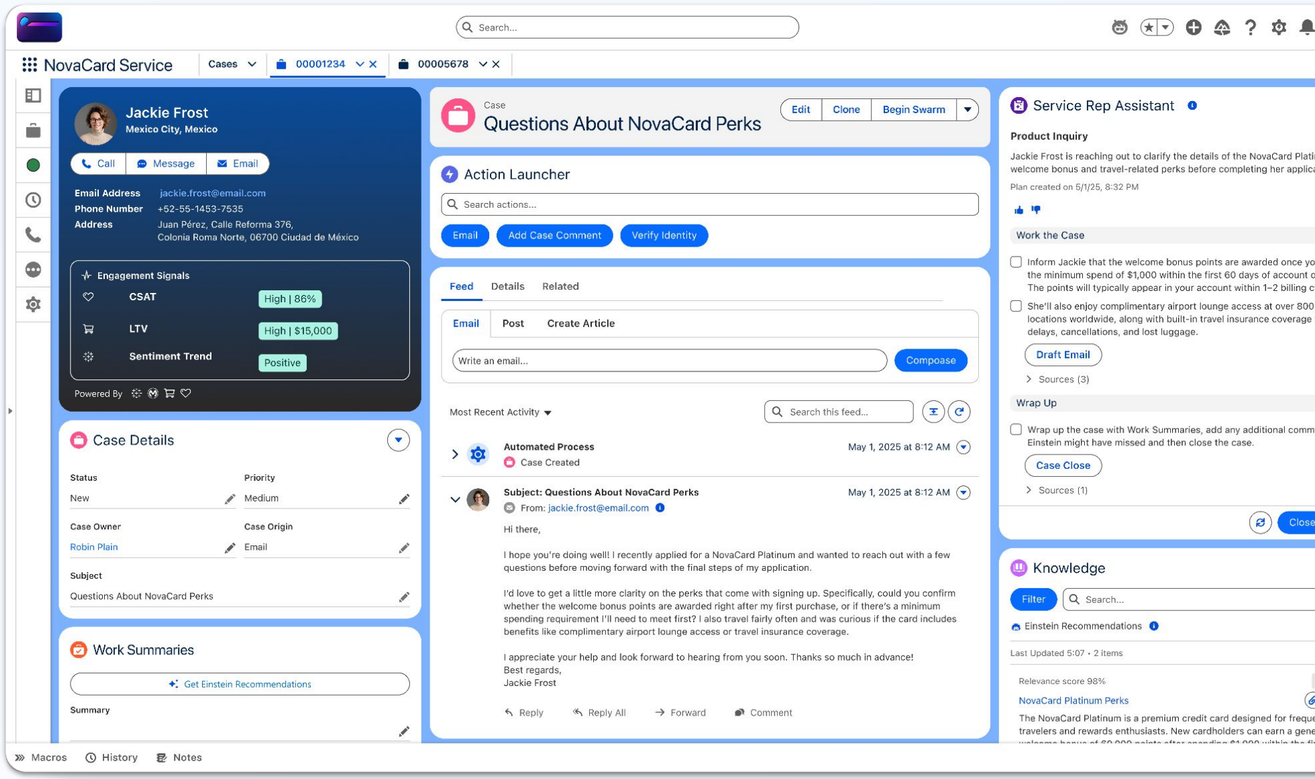

Why it matters

Resolve routine cases instantly and empower reps to focus on high-value work. Create personalized experiences that drive loyalty and revenue. Scale global, 24/7 global support without adding headcount.

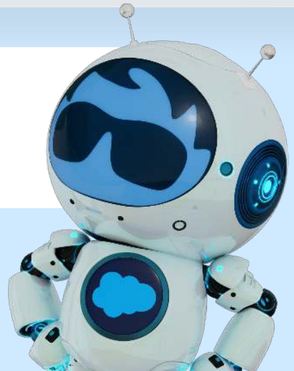

How it's different

Built natively into the #1 CRM, it leverages trusted AI and machine learning, scales with clicks-not-code, and empowers teams to deliver intelligent, consistent end-to-end service.

Workshop Overview

Welcome

You're about to spend two days building a real multi-agency operational platform on Salesforce.

By end of Day 2, your org will have:

- A multi-agency Case data model.
- An Asset hierarchy modeling MTA infrastructure.
- A Service Disruption custom object with full lifecycle automation.
- An Agentforce agent that creates records from natural language.

A note on experience

Mixed Salesforce backgrounds are expected and welcome.

Our team is here to unblock. If something isn't working or doesn't match the guide, raise your hand - we're floating.

The goal isn't speed. The goal is understanding what you built and why it works.

What is ServicePulse 360?

A multi-agency Case + Asset + Service Disruption platform that lets MTA dispatchers go from inbound request to approved rider-facing message in minutes, with an AI agent that creates the record for them.

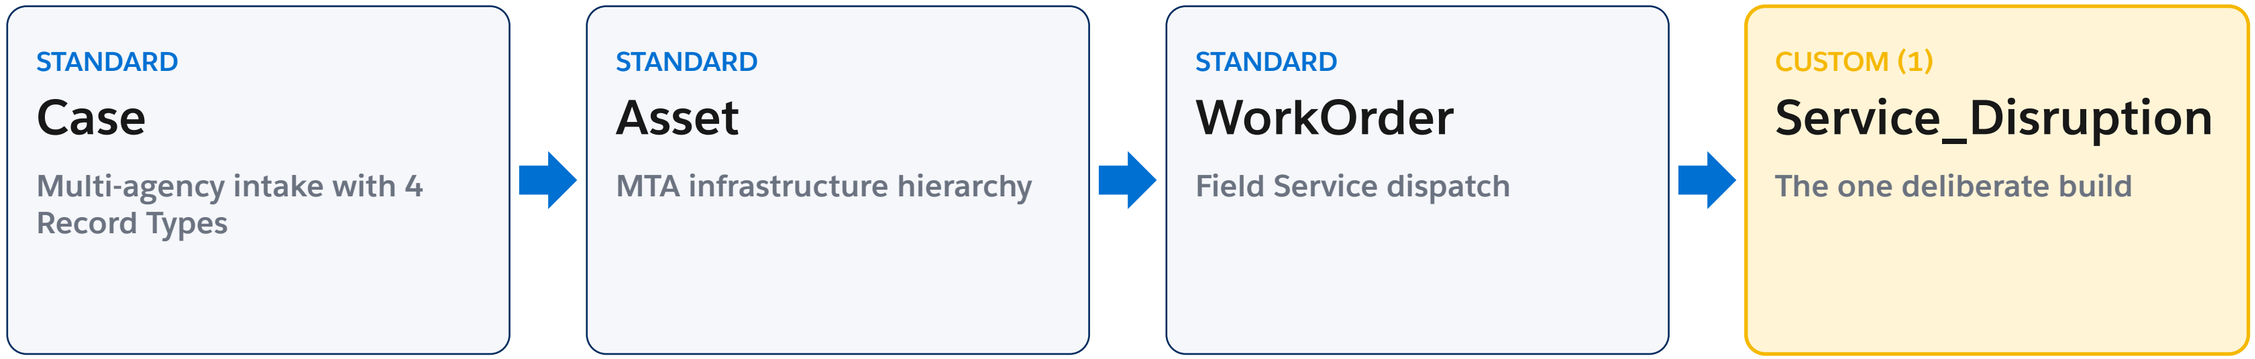

1. **Call comes in**
   Signal fault on 7 Line
2. **Agent files SD**
   One sentence, created
3. **AI drafts message**
   Prompt Builder generates
4. **Human approves**
   Approval Process gates
5. **Dashboard reflects**
   Reports populate

You will build every step of this in a real Salesforce environment.

The Standard-First Approach

You're building on Service Cloud's standard objects and not a custom data model.

One deliberate custom object: Service_Disruption__c. Everything else is Case, Asset, Work Order, Contact.

Record Types do the agency work. Formula fields do the SLA math. Dynamic Forms do the UX. Minimum customizations.

What you'll walk away with

1. **Multi-agency Case model**
   Standard Case + Record Types + Dynamic Forms + Support Process

2. **Asset hierarchy**
   Parent/child Assets modeling physical MTA infrastructure

3. **Service Disruption Platform**
   Custom object with 10 fields, lifecycle automation, SLA formulas

4. **AI-assisted operations**
   Prompt Builder drafting + Approval Process gating

5. **Agentforce dispatcher**
   Natural-language agent that creates and routes Service Disruptions

6. **A mental model**
   Standard-first thinking you'll apply to every future Salesforce build

How this room runs

The workshop site is your home base

Every lab guide, download, agenda, and resource lives there. Keep it open in a tab all day.

Instructors float - grab anyone

If you're stuck, flag us. The labs build upon one another and we’re here to help you maintain momentum.

The guide is the floor, not the ceiling

Follow the steps to stay on pace. Explore beyond them when you're ahead. We'll point out stretch opportunities.

Pacing is flexible

Lab durations are estimates. If one lab runs long, the next flexes. Breaks are posted on the schedule.
